

# momento Topics

A serverless event messaging system you can take to prod today.

Topics delivers a scalable, serverless messaging solution that transforms how your full stack communicates. Seamlessly synchronize states, power chat applications, and connect everything from user interfaces to backend services with only a few lines of code and none of the complexity of WebSockets. Don't let infrastructure slow you down—**start building responsive, state-of-the-art systems with Momento Topics.**

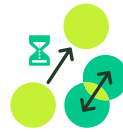

### Connect Everywhere

Connect browser sessions, backend services, and everything in between with our comprehensive SDKs and HTTP API.

### Scale Elasticly

Seamlessly scale from one to millions of subscribers, handling spiky workloads instantly.

### Publish Without Limits

Launch async jobs and workflows with webhooks or create stateful connections with resources like browsers and containers.

### Get Simple Pricing

Pick between usage-based, flat monthly, or custom enterprise pricing options—all with a generous free tier.

### Use Cases

#### Instant Messaging

Deliver messages, reactions, and status indicators in real-time, whether it's chat rooms or private messages.

#### Live Scoring

Stream stats, goals, and player updates in real-time to millions of fans.

#### LLM Response Streaming

Get data to your users as fast as possible by streaming responses from your favorite large language models.

### Upcoming Enhancements

- **Triggers:** Respond instantly to environmental data changes. Automatically publish events on topics as they happen, like hitting a milestone count or when a cache item expires.
- **Buffer and replay:** Miss a message? With an event buffer you can replay messages dropped because of poor connectivity or other network issues.
